

THE MASTER PROJECT BIBLE (GROUND LEVEL EDITION)

I. THE VIRAL DESIGN ENGINE (THE "CLAUDE" LOGIC)

- **The "Grill Me" Audit:** Before any code is finalized, Cursor must perform a self-audit: "Analyze this layout for 'AI-Standard' patterns. If it looks like a generic template, critique it harshly and redesign the component using higher-level CSS logic (Clips, Masks, and Complex Z-Indexing)."
- **Aesthetic Friction:** Intentionally avoid the path of least resistance. If a component feels "standard," add non-standard spacing, unexpected depth layers, or unique micro-interactions.
- **Bespoke Primitive Logic:** Avoid pre-built UI components. Build from "CSS Primitives"—raw Tailwind values and custom properties.

II. THE SANDBOX PROTOCOL (PHASE 1: FOUNDATION)

- **The Homepage Laboratory:** Implement every rule here on the Homepage first.
- **Zero-Creation Policy:** No root directories or secondary pages until the Homepage is 100% approved.
- **DNA Extraction:** Once approved, extract spacing, type, and interaction constants into a Global Design System.

III. TRUST SIGNAL & SOCIAL PROOF ARCHITECTURE

- **The Decision Matrix:** Categorize business intent (Pedigree, Boutique, or Workhorse) to select the appropriate "Proof Pattern."
- **Monochrome Filtering:** All third-party logos must be monochrome (40% opacity) for high-end cohesion.

IV. LIGHT-DOMINANT CONTRAST THEORY

- **The White Canvas:** Primary backgrounds are #FAFAFA.
- **Dark Punctuation:** Dark tones reserved for "structural ink"—lines, coordinates, and motifs.

V. BRAND COLOR RESTRAINT

- **The 5% Rule:** Colors are for CTAs and "Pops" only. Never for backgrounds.
- **Color as Navigation:** Use color as a functional beacon to guide conversion.

VI. ARCHITECTURAL LAYOUT & NON-STANDARD GRIDS

- **Vertical Anchoring:** 100vh vertical elements act as a "spine."
- **Offset Clustering:** Staggered blocks with varying top margins.
- **Broken Grids & Interlocking Sections:** Overlapping edges and "tethered" scroll experiences.
- **70/30 Optical Weight:** Counter-balancing density with extreme typographic scale.

VII. STRUCTURAL ARCHETYPES

- Impact Horizon (Hero), Asymmetric Spine (Info), Cinematic Reveal (Gallery), Minimalist Float (Detail).
- **Intentional Variety:** No repeating layouts back-to-back.

VIII. TYPOGRAPHIC INTENT & PARTNERSHIP

- **The Cliché Ban:** STRICTLY NO SCRIPT OR RUGGED FONTS.
- **Editorial Pairing:** Geometric Sans + Premium Serif.
- **Structural Scale:** 5:1 ratio between H1 and Body text.

IX. COMPOSITIONAL RHYTHM (ANTI-WALL-OF-TEXT)

- **1:3 Boutique Ratio:** Impact Typography vs. Description Text.
- **Editorial Chunking:** Atomize all long-form text into snippets.

X. REPEATABLE BRAND ACCENTS & GEOMETRIC "POPS"

- **Logo Watermarking:** Oversized, low-opacity logo SVGs as background anchors.
- **Logo-Derived UI:** Use fragments for dividers, bullet points, and frames.

XI. DEPTH, TEXTURE & DIMENSIONALITY

- **Anti-Flat Noise:** Subtle SVG grain overlays.
- **Glassmorphism:** Layered backdrop-blur and soft shadows.
- **Machined Borders:** Gradient or "Inner Glow" borders instead of 1px solid lines.

XII. ADAPTIVE COMPONENT ENGINEERING (MOBILE-FIRST)

- **Contextual Reflow:** Every section has a specific "Mobile Alter-Ego."
- **Touch-Optimized Interaction:** Transform "Magnetic" effects into Haptic-ready Scroll Reveals.

XIII. PREDICTIVE LOGIC & PATTERN GRAMMAR

- **Component Semantics:** Consistent visual "language" for buttons/inputs across all pages.
- **Mathematical Spacing:** Strict 4px/8px baseline for all gaps.

XIV. STRUCTURAL INTEGRITY & SEO (PHASE 2)

- **Root Tree:** Next.js App Router hierarchy.

- **SEO Schema:** LocalBusiness and Service JSON-LD injection.
